### **Water Distribution System**

The City of Dillon Water Distribution System division operates and maintains 54 miles of water lines in the distribution system to provide customers with a reliable source of water for residential, commercial and industrial consumption, and for fire protection. The division administers a backflow prevention program to prevent contamination of potable drinking water, a waterline installation and repair program on small lines, a hydrant and valve maintenance program, and a fire hydrant flushing program in addition to installing taps for new customers. The division maintains on-call status to provide 24-hour service. The Water & Wastewater Superintendent oversees the daily operation and maintenance of the Water Distribution System.
